Cholangiocarcinoma, also known as bile duct cancer, is a type of cancer that forms in the bile ducts. Symptoms of cholangiocarcinoma may include abdominal pain, yellowish skin, weight loss, generalized itching, and fever. Light colored stool or dark urine may also occur. Other biliary tract cancers include gallbladder cancer and cancer of the ampulla of Vater.

Pancreatic neuroendocrine tumors (PanNETs) are often referred to as "islet cell tumors," or "pancreatic endocrine tumors." The PanNET denomination is in line with current WHO guidelines. Historically, PanNETs have also been referred to by a variety of terms, and are still often called "islet cell tumors" or "pancreatic endocrine tumors.

Pancreatic cancer is a malignant tumour that develops in the small glandular organ, approximately six inches long, located in the upper abdomen. It is a serious disease that affects the digestive system. Pancreatic cancer is often difficult to detect early on, which is why it is important to understand the risk factors and signs of the disease.

Colorectal cancer is a common type of cancer that affects the large intestine and the rectum. It is a serious disease that can be prevented or treated if caught early. The disease is caused by malignant cells that grow and spread in the lining of the colon. The growth of these cells can lead to the formation of tumors, which can eventually metastasize to other parts of the body.

Alcoholic pancreatitis is a type of pancreatitis that is caused by excessive alcohol consumption. It is a serious disease that can be prevented by avoiding alcohol. The disease is characterized by inflammation of the pancreas, which can lead to severe pain, nausea, vomiting, and swelling. Alcoholic pancreatitis is a serious disease that can be prevented by avoiding alcohol.

Basic research reveals new concepts about the causes of cancer and how it develops, progresses, and responds to therapy. NCI's support of basic cancer research is essential. Long-term investments in research without immediate clinical application are not typically made by industry.

The Journal of Pain and Symptom Management is an international, peer-reviewed journal and is the leading forum for publication of new research and clinical information related to palliative care and pain management. It is the Official Journal of the American Academy of Hospice and Palliative Medicine and the National Hospice and Palliative Care Organization.
